S1 · STUDENT GUIDE

Join and use your tutor

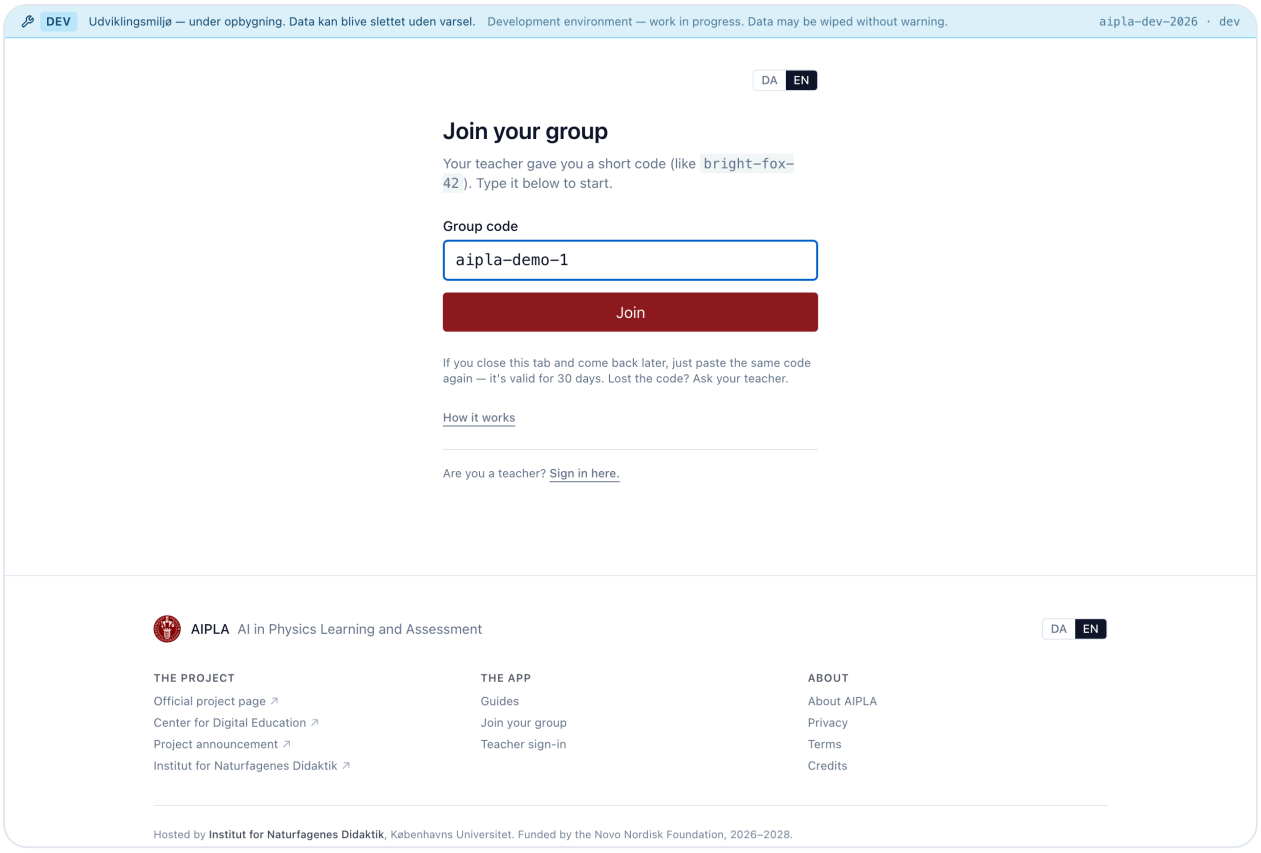

Join with a group code and work with the tutor and its workspace.

For students

You do not need an account or a password. Your teacher gives you a short **group code** — that is all you need to start. This takes about a minute.

Step 1 — Open the link and type your code

Open the student link your teacher gave you. You will see a join page. If the link already filled in your **group code**, just select **Join** (*Tilslut*). Otherwise type the code — it looks like `bright-fox-42` — and then select **Join**. The **DA | EN** switch at the top lets you pick Danish or English.

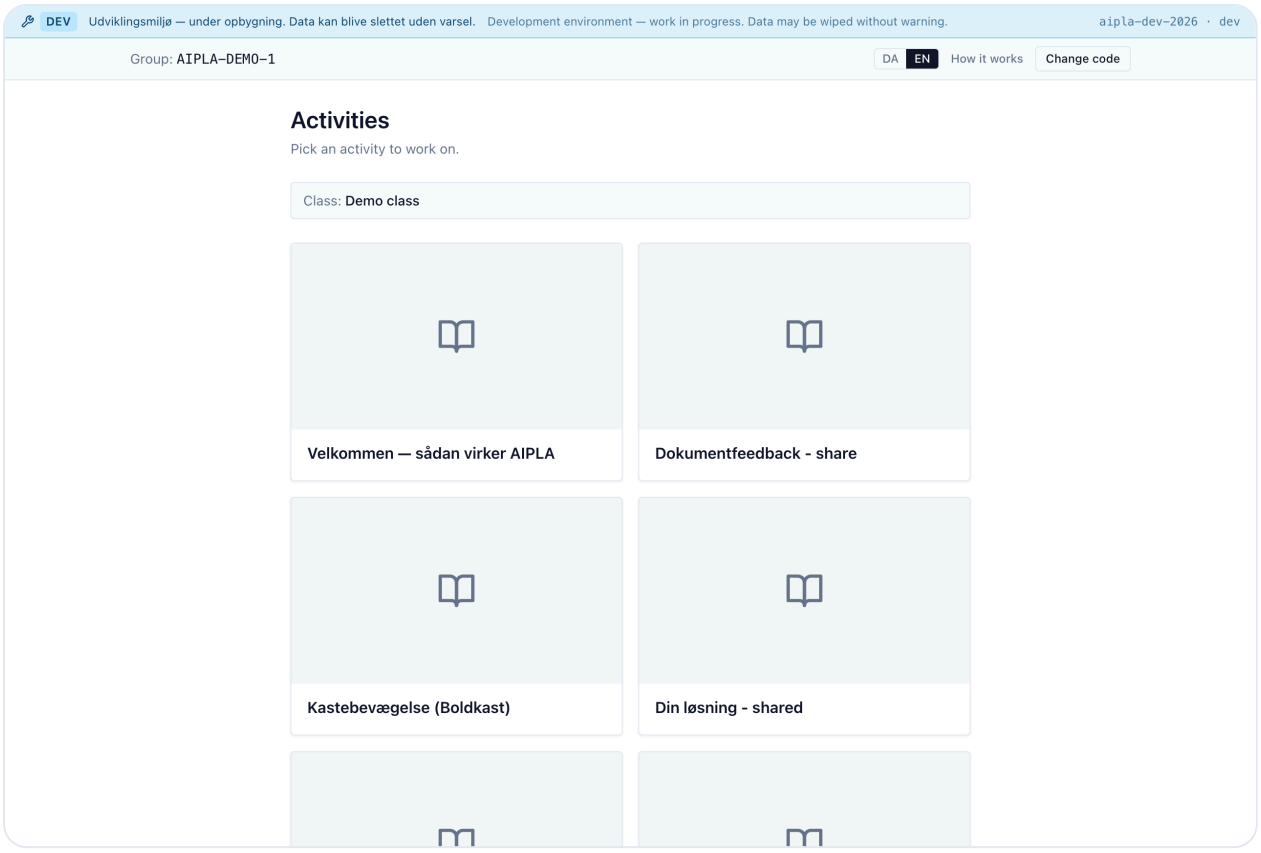

Type the group code your teacher gave you, then Join.

Your code keeps your group's work together. There is nothing to remember and nothing to install.

Step 2 — Choose your activity

After you join, you see the **activities** your teacher has set up. Select the one you are working on.

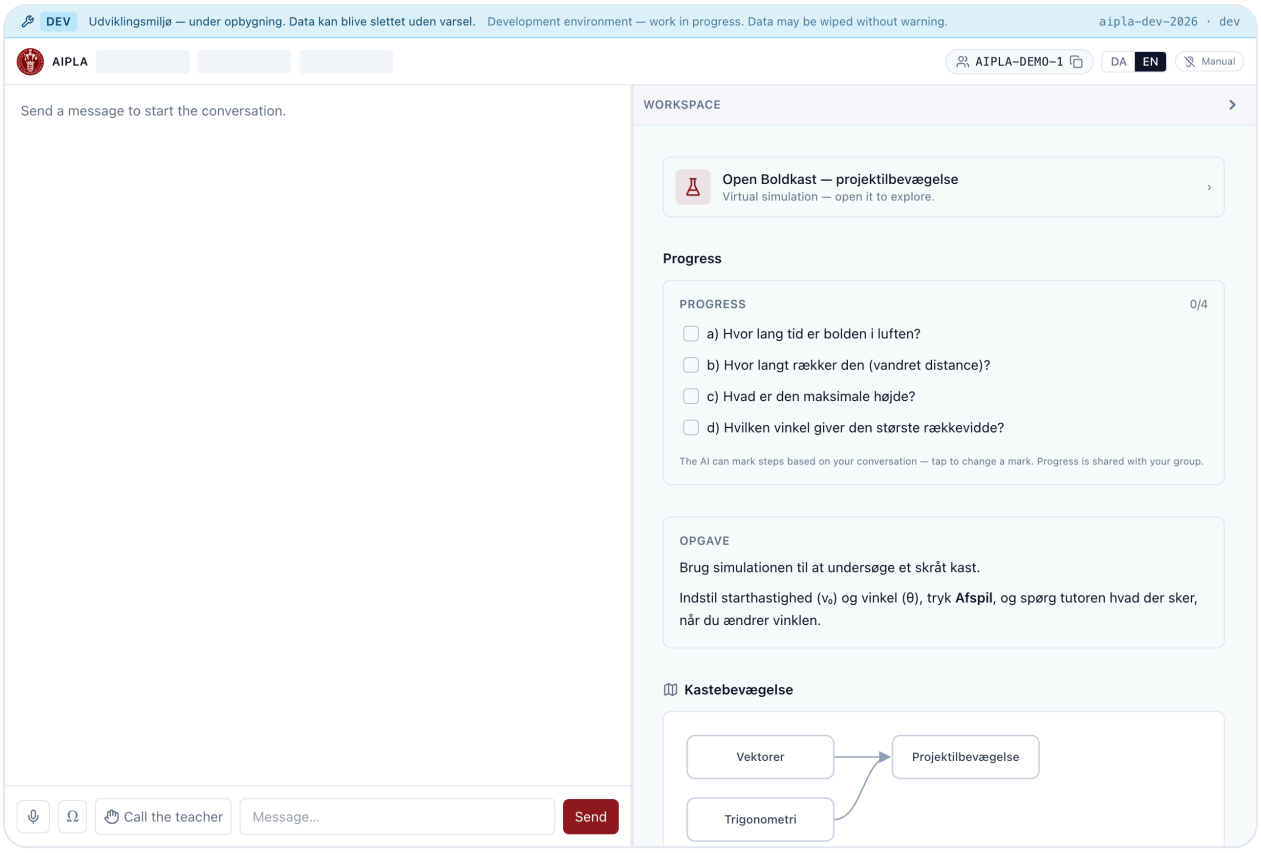

Pick the activity your teacher set for you.

Step 3 — Work with the tutor

The activity opens with two sides: the **tutor** you chat with, and your **workspace** — a simulation, a checklist, a table, a calculator, or notes, depending on the activity. Ask the tutor questions in your own words; it guides you toward understanding rather than just giving answers.

The activity starts in the language your teacher chose. To use the other one, select **DA** or **EN** at the top of the page — the buttons, the tutor and the read-aloud voice all switch together.

The tutor on one side, your workspace on the other.

> **Tip**
>
> Anything you do in the workspace — values you enter, a simulation you run, steps you tick off — is shared with the tutor, so it can help you with your actual work. In some activities the tutor can also change a setting in your simulation. When it does, the chat says **The tutor changed your simulation**, and you can always change it back yourself.

If your code stops working

Group codes can expire, or your teacher may give you a new one. If joining fails, ask your teacher for the current code. Closing the tab signs you out of the group — just open the link and type your code again.
