T4 · TEACHER GUIDE

Author with the AI co-pilot

Describe what you want to teach and let the co-pilot draft it.

Where this fits

The AI **co-pilot** lives inside the activity builder (guide *T2*). Instead of filling in every field by hand, you describe what you want to teach and the co-pilot proposes a teaching goal and workspace elements. You review each proposal and decide what to keep. Nothing changes until you approve it.

What the co-pilot does

The co-pilot (labelled **Co-builder**; **Medbygger** when your screens are in Danish) reads a plain-language description of your lesson and drafts:

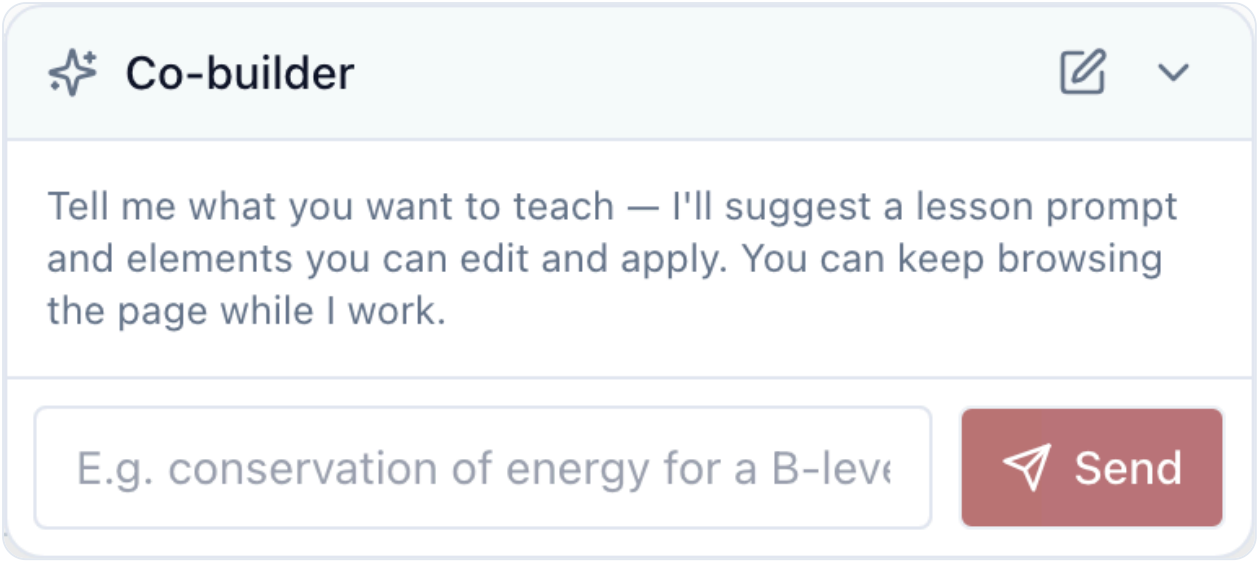

- a **teaching goal** (the lesson prompt the tutor follows),
- **workspace elements** — a checklist, a note, a table, a chart, a calculator, and so on — or a **simulation** from the library,
- a **concept map** for the activity,
- suggested **curriculum materials** to attach (guide *T3*), and how to file the activity (subject, level, tags).

It replies in the language you write in.

Each suggestion arrives as a **proposal** you can apply, edit, or dismiss. You stay in control: the co-pilot never changes the activity on its own.

Step 1 — Open the builder

Create or open an activity (guide *T2*). Click **Ask AIPLA** in the header and choose **Co-builder** — the co-pilot panel opens at the bottom-right of the builder, ready for a description. (The same button offers *AIPLA Help* on every page; on pages with a co-pilot of their own it offers both.)

The co-pilot panel (Co-builder) sits at the bottom-right of the activity builder.

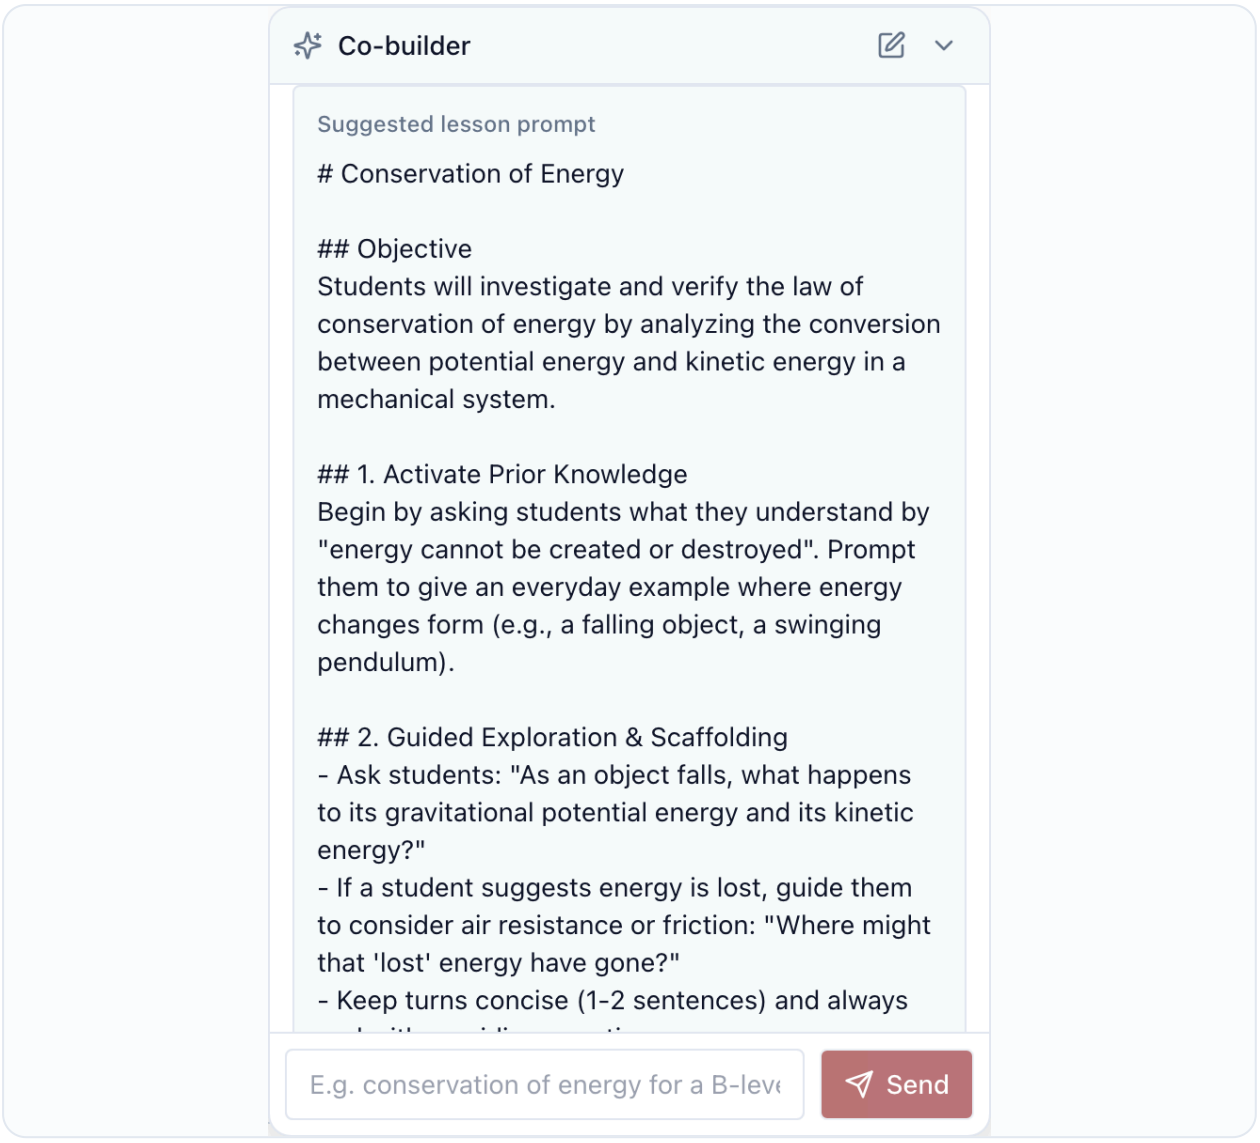

Step 2 — Describe what you want to teach

Type a short description — for example, *"energy conservation for a 2.g class, with a checklist and a worked example"* — and select **Send**. The co-pilot thinks for a moment, then returns one or more proposals.

Step 3 — Review each proposal

Each proposal is a card: a suggested lesson prompt, a checklist, a note, a table, and so on. For each one you can:

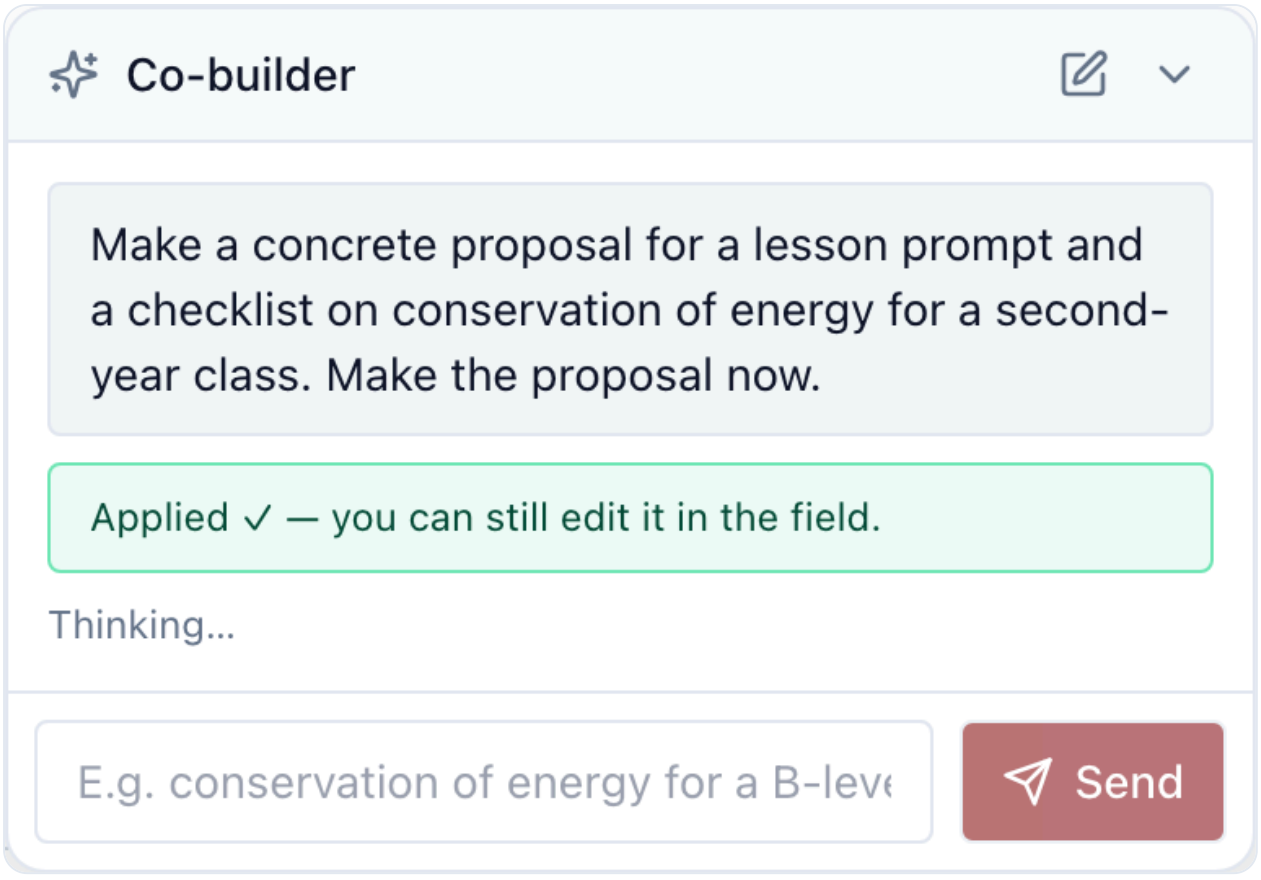

- **Apply** — accept the suggestion into your draft,
- **Edit** — adjust it first, then select **Use this**, or
- **Dismiss** — reject it.

Each suggestion is a proposal card you can apply, edit, or dismiss.

Step 4 — Apply and refine

When you apply a proposal, it drops into the matching field of the builder — and stays fully editable. Applied suggestions are marked so you can see what the co-pilot contributed. Keep refining by hand, or ask for more.

Applied suggestions land in the builder and remain editable.

When the activity looks right, **save** it as usual (guide *T2*). Nothing the co-pilot proposed is live until you save the activity.

> **Tip**
>
> The co-pilot proposes; you dispose. Every change waits for your **Apply**, and even applied changes remain editable before you save — so it is safe to explore its suggestions freely.

Next steps

- Attach source documents the tutor can cite — *T3 — Add and organise curriculum materials*.
- Share the activity with students — *T1 — Set up a class and share it*.
