Where this fits

The AI **co-pilot** lives inside the activity builder (guide *T2*). Instead of filling in every field by hand, you describe what you want to teach and the co-pilot proposes a teaching goal and workspace elements. You review each proposal and decide what to keep. Nothing changes until you approve it.

1 What the co-pilot does

The co-pilot (labelled **Medbygger**) reads a plain-language description of your lesson and drafts:

- a **teaching goal** (the Socratic prompt the tutor follows),
- **workspace elements** — a checklist, a note, a table, a calculator, and so on, and
- suggested **curriculum materials** to attach (guide *T3*).

Each suggestion arrives as a **proposal** you can apply, edit, or dismiss. You stay in control: the co-pilot never changes the activity on its own.

2 Step 1 — Open the builder

Create or open an activity (guide *T2*). The co-pilot panel sits at the **bottom-right** of the builder. It opens ready for a description.

The image shows a user interface for a tool called 'Medbygger'. At the top, there is a header bar with a star icon and the text 'Medbygger' on the left, and a pencil icon and a checkmark icon on the right. Below the header, there is a text area containing the Danish text: 'Fortæl hvad du vil undervise i — jeg foreslår en lærer-prompt og elementer, du kan rette og anvende. Du kan stadig bladre i siden mens jeg arbejder.' At the bottom of the panel, there is a text input field with the placeholder text 'Fx: energibevarelse for en B-klasse...' and an orange button with a paper plane icon and the text 'Send'.

Figure 1: The co-pilot panel (Medbygger) sits at the bottom-right of the activity builder.

3 Step 2 — Describe what you want to teach

Type a short description — for example, “*energy conservation for a 2.g class, with a checklist and a worked example*” — and select **Send**. The co-pilot thinks for a moment, then returns one or more proposals.

4 Step 3 — Review each proposal

Each proposal is a card: a suggested teaching goal, a checklist, a note, a table, and so on. For each one you can:

- **Anvend** (Apply) — accept the suggestion into your draft,
- **Rediger** (Edit) — adjust it first, then apply, or
- **Afvis** (Dismiss) — reject it.

 Medbygger

Hvad tænker du om dette udgangspunkt? Vi kan justere det, tilføje flere detaljer eller ændre fokus, hvis du har andre tanker.

Bare foreslå noget nu; jeg retter det bagefter.

Jeg forstår! Du vil gerne have et konkret forslag at tage udgangspunkt i.

Her er et forslag til en prompt til læreren, som du kan rette til:

Forslag til lærer-prompt

Eleverne skal kunne redegøre for princippet om energibevarelse og anvende det til at analysere bevægelse og energiomsætning i enkle fysiske systemer. De skal også kunne identificere potentielle og kinetiske energiformer og beregne deres værdier.

Tænker...

Fx: energibevarelse for en B-klasse...

 Send

Figure 2: Each suggestion is a proposal card you can apply, edit, or dismiss.

5 Step 4 — Apply and refine

When you apply a proposal, it drops into the matching field of the builder — and stays fully editable. Applied suggestions are marked so you can see what the co-pilot contributed. Keep refining by hand, or ask for more.

 Medbygger

- Har jeg opstillet et udtryk for den samlede mekaniske energi?
- Har jeg anvendt energibevarelsesprincippet korrekt til at løse opgaven?
- Har jeg taget højde for eventuelt energitab (f.eks. pga. gnidning) eller tilførsel af energi?
- Kan jeg forklare mine resultater ud fra energibevarelse?

Hvad tænker du om dette udgangspunkt? Vi kan justere det, tilføje flere detaljer eller ændre fokus, hvis du har andre tanker.

Bare foreslå noget nu; jeg retter det bagefter.

Fx: energibevarelse for en B-klasse...

 Send

Figure 3: Applied suggestions land in the builder and remain editable.

When the activity looks right, **save** it as usual (guide *T2*). Nothing the co-pilot proposed is live until you save the activity.

 Tip

The co-pilot proposes; you dispose. Every change waits for your **Anvend** (Apply), and even applied changes remain editable before you save — so it is safe to explore its suggestions freely.

6 Next steps

- Attach source documents the tutor can cite — *T3 — Add and organise curriculum materials.*
- Share the activity with students — *T1 — Set up a class and share it.*
