

S1 · STUDENT GUIDE

Join and use your tutor

Join with a group code and work with the tutor and its workspace.

For students

You do not need an account or a password. Your teacher gives you a short **group code** — that is all you need to start. This takes about a minute.

Step 1 — Open the link and type your code

Open the student link your teacher gave you. You will see a join page. Type your **group code** — it looks like `bright-fox-42` — and select **Join** (*Tilslut*).

Tilslut din gruppe
Join your group

Din lærer har givet dig en kort kode (ligner `bright-fox-42`). Skriv den her for at starte.
(Your teacher gave you a short code — type it below to start.)

Gruppekode (Group code)

Tilslut / Join

Hvis du lukker fanen og kommer tilbage senere, skal du bare skrive koden igen — den er gyldig i 30 dage. Glemte koden? Spørg din lærer.
(If you close this tab and come back later, just paste the same code again — it's valid for 30 days. Lost the code? Ask your teacher.)

Sådan virker det / How it works

Er du lærer? [Log ind her](#) / Are you a teacher? Sign in here.

[Privatlivspolitik / Privacy](#) · [Vilkår / Terms](#) · [Krediteringer / Credits](#)

Type the group code your teacher gave you, then Join.

Your code keeps your group's work together. There is nothing to remember and nothing to install.

Step 2 — Choose your activity

After you join, you see the **activities** your teacher has set up. Select the one you are working on.

Pick the activity your teacher set for you.

Step 3 — Work with the tutor

The activity opens with two sides: the **tutor** you chat with, and your **workspace** — a simulation, a checklist, a table, or notes, depending on the activity. Ask the tutor questions in your own words; it guides you toward understanding rather than just giving answers.

The screenshot displays the AIPLA interface. On the left is a chat window with a tutor named Sofie. The chat history shows Sofie's initial greeting and a list of prompts for the user to choose from. The user has responded with 'Hej! Velkommen til vores fysik-samtale. Hvilket fysikkoncept eller emne har du lyst til, at vi skal undersøge sammen i dag?'. Below this, a drawing area is visible with the text 'starthastighed' and a dashed line indicating a trajectory. On the right is the workspace, titled 'ARBEJDSOMRÅDE'. It contains a task titled 'Åbn Boldkast — projektilbevægelse' with a sub-task 'Fremgang' (Procedure) and a list of four multiple-choice questions. Below the questions is a section titled 'OPGAVE' (Task) with instructions to use the simulation to investigate a projectile launch.

The tutor on one side, your workspace on the other.

💡 Tip

Anything you do in the workspace — values you enter, a simulation you run, steps you tick off — is shared with the tutor, so it can help you with your actual work.

If your code stops working

Group codes can expire, or your teacher may give you a new one. If joining fails, ask your teacher for the current code. Closing the tab signs you out of the group — just open the link and type your code again.
